DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 24, drawn to a cable handling system controlling tension, classified in class 242, subclass 412.2.
- II. Claims 11-23 and 25, drawn to a mobile platform with a drive system sensor for determining platform velocity and controlling a cable handling system to correspond to the platform velocity, classified in class 191, subclass 12.2A, or class 89, subclass 1.13.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require an idler sensor for determining the length and speed of the cable. The subcombination has separate utility such as retracting cables without corresponding to the platform velocity.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
